

Talking Tactile Pen

Touch Graphics, Inc.

The Shark Anatomy App.

Touch Graphics, in collaboration with scientists at the Smith Kettlewell Eye Research Institute, announces the Talking Tactile Pen! This tool achieves a new level of portability and sophistication in audio-tactile interactive computing.

As students explore various raised-line and textured images, they touch the tip of a Livescribe *Echo* pen to any feature they would like to know about. The pen's on-board computer determines its location on the tactile surface, then plays spoken descriptions through a tiny speaker or headphones. Subsequent taps in the same spot reveal more information. A simple user graphical user interface allows students to adjust volume, hear the previous message again or get help.

Livescribe Echo is a trademark of Livescribe Corp. Copyright 2012 by Touch Graphics, Inc and Smith Kettlewell Eye Research Institute

The TalkingTactile Pen has been developed through a series of research grants from the United States Department of Education, National Institute for Disability and Rehabilitation Research and National Science Foundation, Research in Disabilities Education - Focused Research Initiative. These agencies have not endorsed these products.

Talking Tactile Pen
